The Story

The dark island of **Ever-Mist** is permanently enshrouded in a deep, dreary fog. Many adventurers have traveled there in quest of the legendary **Golden Statue of Bomberman**, but none have returned.

The legend states, "He or she who gathers together the **three celestial medals of power**, which lie on the island of Ever-Mist, shall open the gates and gain access to the statue."

Learning this, Bomberman sets off on another great adventure!

BEFORE STARTING THE GAME

When using the Virtual Boy, several adjustments must be made before starting the game. For your health and safety, be certain to perform these adjustments each time you play. If you wear glasses or contact lenses, be sure to wear them while using the Virtual Boy.

Insert the Game Pak into the Virtual Boy, then turn the POWER switch located on the front of the controller to the ON position. When the screen pictured to the right appears, continue with the IPD and FOCUS adjustments.

Press START to display the "IPD and FOCUS adjustment screen." Both adjustments are made using this screen.

IPD Adjustment

This adjustment sets Virtual Boy to the distance between your eyes (the Inter Pupil Distance).

While looking at the adjustment screen, turn the IPD dial located on top of the Virtual Boy until you can see a mark in all four corners of the screen, as shown on the screen to the right.

The best adjustment may allow you to see only three marks, or four slightly blurred marks. When you have completed the IPD adjustment, proceed with the FOCUS adjustment.

Focus Adjustment

This adjustment makes sure that you see the game image in the Virtual Boy display clearly.

Move the FOCUS slider to the CENTER POSITION as marked on the housing. For most people, the center position should give you the clearest image. If the image is still fuzzy, adjust the FOCUS slider right or left until the image is sharp and clear.

During Game Play

To access the IPD and FOCUS Adjustment screen while playing the game, press the L and R Buttons simultaneously on the "won/lost" screen. After completing any necessary adjustments, press START to return to game play.

Automatic Pause Function

All Virtual Boy Game Paks contain an automatic pause function. After completing the IPD and FOCUS adjustments, press **START** and the screen pictured at the right will appear. The automatic pause is preset to the **ON** position. Nintendo recommends that you **ALWAYS** set the automatic pause to **ON**. To override the setting, use **←** or **→** on the L +Control Pad, then press **START** to begin the game demo. Pressing **START** again will advance you to the game title screen.

After playing a Boss stage, every third stage, the game will present you with the Automatic Pause Screen. At this point, please take a break and rest.

Press **START** to restart the game.

SCREEN EXPLANATIONS

PLAYING PANIC BOMBER

The blocks drop from the top of the screen in groups of three. They may be rotated or moved from side-to-side.

Once three of the same blocks are in a row vertically, horizontally or diagonally they disappear and an equivalent number of unit bombs appear at the bottom of your screen.

Occasionally, a live bomb will drop in from the top of the screen. When these bombs touch other objects, they explode. Their explosions will set off any other bombs and scorched bombs in

range, causing a chain reaction of bomb blasts!

After the explosion, a number of scorched bombs will appear at the bottom of your opponent's playing field.

When objects clog up the top center of the playing field, the game is over.

The more blocks you cause to disappear, the higher your Decker Bomb Meter will go. When the meter fills, a Decker Bomb will appear.

Decker Bombs will clear a great deal of the clutter from your playing field.

There are two power ups that occur during game play: Level Up and Flame Up.

- 1. Level Up: Defeating the enemy at certain percentages will
- 2. Flame Up: Increasing the level of each of your cards.

Now that you understand the basics, it's off to the island of Ever-Mist!

PLAYING IN SKULL MODE

In each setting on the island, you battle two locals and then a Boss. In Skull Mode you may use Skull Items during your battle. (There also is the Normal Battle Mode—see page 19).

In Skull Mode, bricks appear on the bottom of the screen instead of scorched bombs. If these bricks are blasted, they will turn into a random assortment of Skull Items. Skull Items will be displayed in Decker Bomb display.

Skull items adversely affect the game play for your opponent for a limited amount of time.

Skull Mode is the default mode. You may switch modes on the Option Screen.

Skull items appear when you blast the bricks!

The latest Skull Item to appear will cancel any current item.

EXAMPLES OF SKULL ITEMS

Interfering Bomber floats around the playing field disrupting normal play.

NEXT

Bomb turns the next object to enter the playing field into a Decker Bomb.

Speed Blocks increase the fall rate of objects entering the playing field.

Brick-to-Bomb turns all bricks into unit bombs.

Joystick reverses the functions of the +Control Pads.

Bomb-to-Boom lights the fuses of all the bombs in the playing field.

Stop freezes everything in the playing field for five seconds.

Block-to-Blank removes ALL the blocks from the playing field.

Add much, much more!

THE CONTINUE & PASSWORD SCREENS

CONTINUE

The player will lose when the last blocks stack up to the top center of the playing field. After the "LOST" appears, the Continue screen will be shown. You may continue if you press either the A Button, START, or → on the Right +Control Pad before the countdown reaches zero. There is no limit to how many times you can continue.

PASSWORD

Each time you defeat a Boss, you will receive a password. The password will be a set of four numbers. To re-start a previous game, choose PASSWORD from the main menu. Use the Left +Control Pad to enter the password. Press ↑ or ↓ to change the numbers; and ← or → to switch positions. Play resumes at the stage following the last Boss you defeated.

THE ITEMS

UNLIT BOMBS

As you make blocks disappear, these will appear at the bottom of the playing field. On occasion, they will drop in from the top of the playing field.

SCORCHED BOMBS

These appear in your enemy's playing field when you set off a lot of Unlit Bombs all at once. A bomb blast will clear them.

BRICKS

These appear instead of Scorched Bombs when playing in Skull Mode. When blasted, they will turn into Skull Items.

LIT BOMBS

These drop in from the top of the playing field and explode when they land. Their blast radius will set off any Unlit Bombs when caught within it.

DECKER BOMBS

These appear when your Decker Bomb Meter reaches the top. They blast away much of what is on your playing field.

ROCKS

These appear in Skull Mode. Only a Decker Bomb can clear them from your playing field.

THE RULES & OPTIONS EXPLAINED

THE RULES

This mode explains how the game is played. On the main menu screen, choose "The Rules" and watch the explanatory demonstration.

TIPS

TIPS

The more Blocks you cause to vanish, the quicker your Decker Bomb Meter, the Level Up and Power Up rankings will increase. Additionally, you will get many more until bombs to work with.

The illustrations on the left show how to create Chain Reactions. The more chains you can make at once, the better. If you set off a chain of 4 groups, a variety of special events will rock your opponent!
